Summary

I'm a full stack software engineer who builds .NET and Angular applications on Azure. I started at Optimal Blue as an intern and have been promoted four times, most recently to Level 4 Software Developer. I lead changes that spread across teams, like moving our pipelines to YAML and our testing to Playwright, and I mentor developers and review code regularly. I also work with real-time features in SignalR, Docker-based development, Azure networking and infrastructure as code. I'm eligible to obtain a U.S. security clearance.

Experience

Optimal Blue | Dallas, TX (remote)

Software Developer Level 4 | 2026 - present

Software Developer Level 3 | 2024 - 2026

Software Developer Level 2 | 2022 - 2024

Software Developer Level 1 | 2020 - 2022

Software Developer Intern | 2019 - 2020

- Led our team's move from classic Azure Pipelines to YAML pipelines in version control. I built the proof of concept, migrated the whole team, presented our approach to other teams and advised them through their own migrations. Build times dropped 50%. In 2026 our team moved from Azure DevOps to GitHub. I planned our GitHub Actions approach with the DevOps team and helped my team adopt the GitHub CLI and stacked PRs.
- Led the move of the whole org from Selenium and Postman to Playwright. I followed the same path: proof of concept, full migration of my team, technical presentations, and guidance for other teams.
- In 2026, my team led a cross-org effort to move our UI components into a shared Angular library. The work took a lot of design and testing to make the library extensible and as easy to use as an open-source one.

- Built real-time features with SignalR, including live streaming of integration updates to the UI and streamed responses in an LLM chat application.
- Designed and shipped an agentic LLM chat application that lets mortgage clients query large datasets in plain language, using Semantic Kernel, Azure AI Services, RAG and multi-step agents. Led the company AI hackathon and shared tooling and best practices with other teams.
- Manage Azure environments and networking, including VNets, private endpoints, DNS, Traffic Manager and load balancers. Wrote the Bicep templates the company now uses for deployments, working with DevOps.
- Set up .NET Aspire and Docker dev containers for local development, and upgraded legacy applications to current .NET and Angular versions.
- Mentor at least one developer at all times, review code across teams, and interview engineering candidates. Other teams regularly come to me for guidance.
- Had one production defect in the past year across all supported applications.

Ayoka Systems | Dallas, TX

Software Developer Intern | Dec 2018 - May 2019

- Built full stack, client-facing web applications in JavaScript and .NET in a consulting environment.

Skills

Languages: C#, TypeScript, JavaScript, Python (scripting), SQL, Swift and Go (personal projects)

Backend: .NET 8+, ASP.NET, Entity Framework, SignalR (WebSockets), Node.js

Frontend: Angular, HTML/CSS

Cloud and infrastructure: Azure (App Services, Functions, Cosmos DB, SQL, networking), Bicep, ARM templates, Docker, dev containers, .NET Aspire

Testing and delivery: Playwright, GitHub Actions, Azure DevOps (YAML pipelines)

AI: Semantic Kernel, Azure AI Services, Anthropic Claude, RAG, agentic workflows

Platforms: macOS, Linux, WSL

Education

University of Texas at Dallas | B.S. Computer Science | 2020

- Capstone: led a student team that built a desktop application for medical research, working with a faculty professor.

Southern Methodist University | Full Stack Web Development Bootcamp | 2019

Bishop Lynch High School | Dallas, TX | 2016
